SUMMARY

Technology enthusiast pursuing a B.Tech in Electronics & Communication Engineering, with a strong foundation in Java, Data Structures & Algorithms, and software development fundamentals. Hands-on experience across machine learning, deep learning, and embedded systems, with a focus on taking ideas from concept to implementation across both software and hardware domains.

TECHNICAL SKILLS

- **Programming Languages:** Java (NPTEL Certified), Python
- **Web Technologies:** HTML5, CSS3
- **Data Structures & Algorithms:** Arrays, Linked Lists, Stacks, Collection Framework, Sorting
- **CS Fundamentals:** Object-Oriented Programming, DBMS & SQL, Operating Systems, Computer Networks
- **Hardware & Embedded Systems:** Arduino, IoT Fundamentals, Sensor Integration
- **Tools & Platforms:** Git, GitHub, VS Code, IntelliJ IDEA, PyCharm
- **Soft Skills:** Problem Solving, Leadership, Team Collaboration, Communication

RELEVANT COURSEWORK

- Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems (SQL), Operating Systems, Computer Networks, Digital Electronics

PROJECTS

Personal AI Assistant

Python

- Developed a Python-based personal AI assistant with voice interaction, contextual conversation, and modular task execution.
- Integrated multiple LLM providers and speech recognition to automate user requests.
- Designed a scalable architecture for future tool integrations and enhanced conversational capabilities.

Simple Banking System

Java

- Developed an object-oriented Banking System in Java using Git for version control and modular code design.
- Implemented account creation, deposits, withdrawals, and balance checks with structured class design and encapsulation.
- Added input validation to prevent invalid transactions and ensure reliable account handling.

Intruder Alarm System

Hardware Project

- Built a motion-based intruder detection system using sensors and a microcontroller to identify unauthorized movement, with automatic alarm triggering.
- Gained hands-on experience in sensor interfacing and real-time signal handling.

Arduino Weather Station

Hardware Project

- Created an Arduino-based weather monitoring system to measure temperature and humidity using sensor modules.
- Programmed real-time data collection and display, building skills in embedded programming and hardware-software interfacing.

CERTIFICATIONS

- Programming in Java — NPTEL, IIT Kharagpur (Elite, 76%), 2026
- Programming using Java — Infosys Springboard, Mar 2026
- Data Structures & Algorithms using Java — Infosys Springboard, Mar 2026

EDUCATION

Lakshmi Narain College of Technology — B.Tech, Electronics and Communication Engineering

Bhopal, MP | 2023 – 2027

CGPA: 7.63

ACHIEVEMENTS & LEADERSHIP

- Continuously improved problem-solving skills by regularly practicing Data Structures & Algorithms using Java.
- Participated in technical workshops and coding practice sessions focused on electronics and programming.
- Coordinated team activities during academic mini-projects, distributing tasks and supporting on-time delivery.
